About the Role:

Step into the future of technology. Join Global Business analyst as an AI Research Engineer and work on cutting-edge artificial intelligence solutions that drive innovation, automation, and intelligent decision-making across industries — all from a flexible remote environment.

💡 What You'll Do:

Design, develop, and optimize AI / machine learning models.

Conduct research on advanced algorithms, deep learning, and data-driven systems.

Analyze large datasets to train and improve model performance.

Collaborate with cross-functional teams to deploy AI solutions into real-world applications.

Stay updated with the latest trends in AI, NLP, computer vision, and automation.

🎯 What We're Looking For:

Strong background in AI, Machine Learning, Computer Science, or related fields.

Proficiency in Python, TensorFlow, PyTorch, or similar frameworks.

Experience with data modeling, algorithms, and statistical analysis.

Strong problem-solving and research-oriented mindset.

Bonus: Experience in NLP, deep learning, or AI product development.

✨ Why You'll Love It Here:

Work on cutting-edge AI technologies and real-world applications.

Flexible part-time, fully remote setup.

Opportunity to grow into senior AI / ML engineering roles.

Be part of a forward-thinking, innovation-driven environment.
